## Kerkstra Precast's barriers set days faster than planned

Kerkstra Precast Inc. of Grandville Mich. has supplied precast j-j hook connection road barriers to AJAX Paving Co. for placement along seven miles of U.S. 131 in Kent County Michigan.

The Kerkstra Precast's road barriers were expected to take five days to set with Easi-Set Industries' j-j hook connection, but the task took only three days because of the ease of use of the j-j hook connection. The j-j hook road barrier connection consists of two interlocking steel channels that are positioned to hook to each other and hold the barriers together without pins and bolts.

On a typical day with typical road barriers, AJAX spokesman Joe Stevens said he likes to see about 4,000 feet of barrier set. But with the use of Kerkstra Precast's road barrier with j-j hook connection, his company set 7,000 feet of barrier on the first day alone.

and longer run times between charges. .

This ride-on scraper is used to remove a variety of materials from concrete surfaces, including thick coatings such as epoxies and urethanes, adhesives, thinset mortar and roofing material. It also successfully removes floor coverings such as VCT, carpet, marble, ceramic tile, vinyl, wood flooring, rubber and other materials.

The BMS 220BX is a compact unit, making it suitable for commercial, light industrial, retail and residential jobsites. It fits easily through doorways and into tight areas and is light enough for standard elevators.
