

LEAN PROJECT AWARDS >

New Construction, Contractors Over \$150 Million

Suffolk Construction Company, Inc.

**Fort Belvoir BRAC 132 USALSA Administration Building and Parking Garage
Washington Contractor Award**

The BRAC 132 USALSA project was a multi-story command headquarters building with a separate elevated parking garage, consisting of 97,000 square feet of administrative space, an emergency operations center, appellate courtroom and adjoining spaces and secure conference rooms.

Suffolk Construction incorporated lean processes throughout the project, reducing waste in terms of time, decision-making and pollution/environmental harm, creating a safer jobsite by developing a predictable work flow and developing as many components to the project off-site and installing them in a modular manner, thus increasing workmanship and preserving the quality of the project. The building was completed in September 2011, 10 months after its groundbreaking.
