

Easi-Set Industries Announces Launch of New Slenderwall Feature

Easi-Set Industries recently launched a leak detection feature now available on its Slenderwall architectural precast panel system.

H2Out is an in-the-caulk joint, secondary drainage, street-level leak detection system. Caulk leaks exit to the outside of the building and can be located within 20 ft (6 m) of the leak, regardless of the building's age.

The product was developed to assist building owners in protecting their buildings.
