

Smith-Midland to provide precast panels to M Square

Smith-Midland Corp. will provide the architectural precast concrete panels for the construction of "M Square," Maryland's largest research park located in College Park, Md. The 124-acre M Square Research Park site, owned by the University of Maryland, will encompass 2 million square feet and be located next to a world-class university as well as in close proximity to Washington.

The \$1.5 million contract awarded to Smith-Midland features 38,000 square feet (333 pieces) of architectural precast panels. The finish on the panels is a combination of two architectural concrete mixes, buff colored precast with a light acid wash finish and a cocoa brown colored mix with a medium acid wash finish.
